Abstract

"Pearl" is an advanced skincare platform designed to help users manage their skincare through
personalized routines and AI-driven skin analysis.

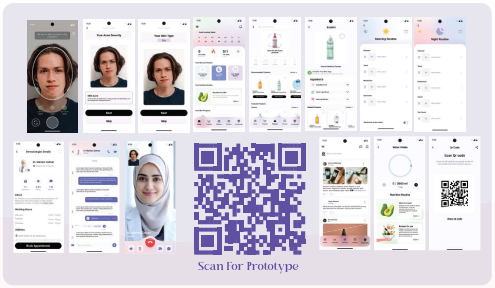

By processing user-uploaded images and responses, the app offers tailored recommendations, primarily focusing on acne management.

It aims to improve accessibility to effective skin-care solutions, boosting user confidence and overall skin health.

System Arctiecture

Proposed App

Objectives

Create an AI-powered skincare system that accurately **analyzes skin type** and conditions using deep learning.

Provide **personalized skincare routines** to help users manage acne and other skin issues.

Offer easy access to skincare advice for adolescents and young adults to improve their self-esteem and well-being.

Suggest **customized diets** for skin health and recommend professional consultations with doctors.

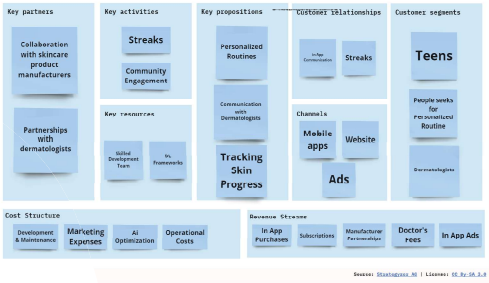

Background

The global prevalence of acne and skin-related issues highlights a significant need for personalized skincare solutions.

Many users, especially adolescents, struggle with finding effective routines and products, which affects their confidence and mental well-being.

"Pearl" addresses these challenges by leveraging deep learning to deliver customized skincare advice and progress tracking, filling a critical gap in the market.

Business Model

Technologies

Conclusion

"Pearl" demonstrates the potential of AI in transforming skincare by providing a user-friendly, highly personalized experience.

Through accurate skin analysis and tailored routines, the app addresses key challenges in skincare management, promoting healthier skin and improving the quality of life for users, particularly young individuals.
